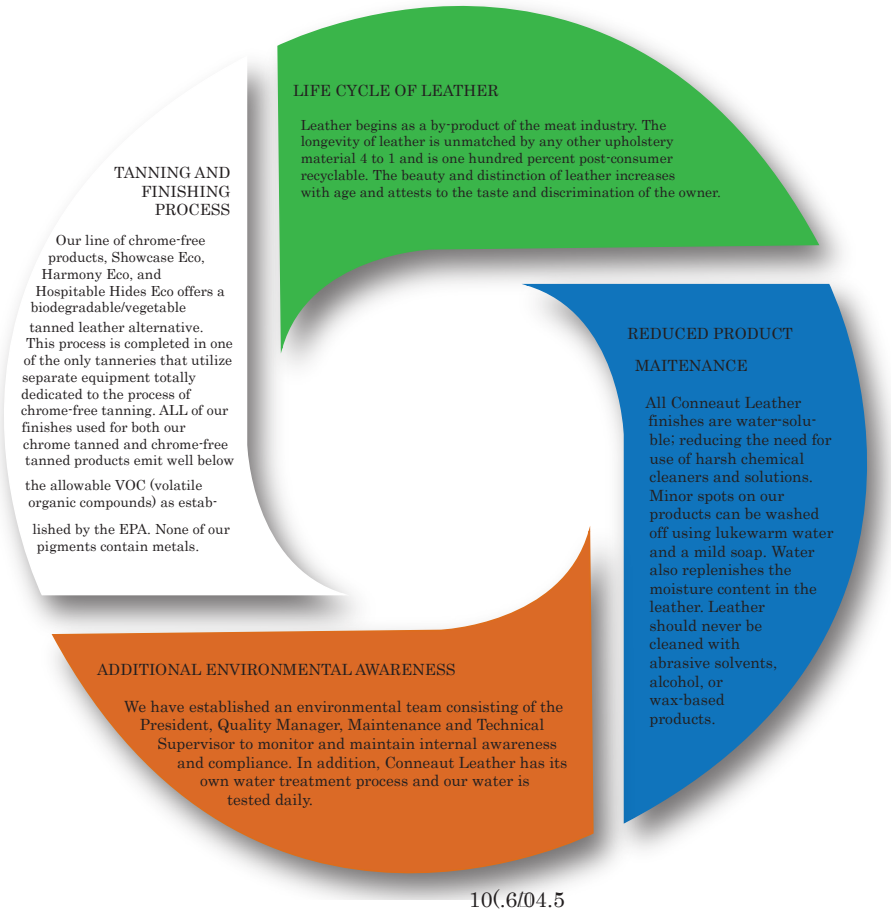
CORTINA

LEATHERS



LIFE CYCLE OF LEATHER
Leather begins as a by-product of the meat industry. The longevity of leather is unmatched by any other upholstery material 4 to 1 and is one hundred percent post-consumer recyclable. The beauty and distinction of leather increases with age and attests to the taste and discrimination of the owner.
TANNING AND FINISHING PROCESS
Our line of chrome-free products, Showcase Eco, Harmony Eco, and Hospitable Hides Eco offers a biodegradable/vegetable tanned leather alternative. This process is completed in one of the only tanneries that utilize separate equipment totally dedicated to the process of chrome-free tanning. ALL of our finishes used for both our chrome tanned and chrome-free tanned products emit well below the allowable VOC (volatile organic compounds) as established by the EPA. None of our pigments contain metals.
REDUCED PRODUCT MAITENANCE
All Conneaut Leather finishes are water-soluble; reducing the need for use of harsh chemical cleaners and solutions. Minor spots on our products can be washed off using lukewarm water and a mild soap. Water also replenishes the moisture content in the leather. Leather should never be cleaned with abrasive solvents, alcohol, or wax-based products.
ADDITIONAL ENVIRONMENTAL AWARENESS
We have established an environmental team consisting of the President, Quality Manager, Maintenance and Technical Supervisor to monitor and maintain internal awareness and compliance. In addition, Conneaut Leather has its own water treatment process and our water is tested daily.
