

A-Arm – How To Wrap long Loads

If you want to wrap long rectangular shaped loads on the A-Arm model there are some guidelines that need to be followed;

- 1) Consult with your Cousins Packaging Regional Manager if one of the load dimensions (L or W) is over 64". The application may require special handling and the optional one (1) ft. base extension.
- 2) Depending on the mix of load sizes, loads larger than 64" x 64" (90" diagonal) may, but not always, require the operator to place the load on the turntable with the shortest side facing the machine tower as shown below. Your Regional Manager will advise the best loading procedure after all load sizes are provided.
- 3) A very large load diagonal may require the film carriage to feed film at a faster rate. The inexpensive High Speed Film Feed Option may be required.
