

SPLIT BASE / SCALE READY OPTION **FOR OVERSIZED LOADS AND/OR SCALE MOUNTING**

The Split Base Option is recommended:

- ❖ When the customer has an existing platform scale that functions properly and wants to continue to use it. The separate turntable can be mounted on top of the existing scale.
- ❖ For very large load sizes. The split base is an alternative to needing a long base extension.

NOTES:

- 1) The Split Base Option is only available on our high profile turntable models HP-2100-SRT, HP-SW, HP-1100-S.
- 2) With a factory quote it can be added to the fully automatic A-Arm (HP-SWA) if the application is approved by our engineering Department.
