

WRAP AND WEIGH MACHINES

SAVE FLOOR SPACE.....SAVE LABOR.....SAVE MONEY

Combine two operations into one location saving time and space

The average time to move a pallet to the scale and then move it again to a wrapper is 4 minutes

This amounts to \$ 6,000 to \$ 8,000 savings per year at only 25 loads per day!

PLUS you now have the use of approximately 100 sq. ft. of your valuable floor space!

STAND ALONE SCALE

STAND ALONE PALLET WRAPPER

**4100 with INTEGRATED PLATFORM
SCALE AND INDICATOR**

All machines can be loaded with pallet jacks, powered walkies and/or forklifts

The integrated platform scale with indicator option is available on all 4100-T & H models

Do you already have a 4' x 4' scale?

You can save money by installing the 4100 over your existing scale.

Each package is equipped with a Matrix GSE250 digital indicator that displays weight only and has no communication capability.

You can upgrade to the Matrix 365 for communication features:
OMTRX365UG – Upgrade digital weight indicator from GSE250 model to Matrix 365 model. GSE250 indicator is for load weight only – communication features not available. Matrix 365 indicators have programming features for printers and communication capability.
