Atlas Gold / Silver Project:
A new generation precious metal project in the Mio-Pliocene volcanic arc of northern Chile

Cautionary Statement

This presentation contains certain statements that may be deemed “forward-looking statements”. All statements in this release, other than statements of historical fact, that address future production, reserve potential, exploration drilling, exploitation activities and events or developments that the Company expects to occur, are forward looking statements. Forward looking statements are statements that are not historical facts and are generally, but not always, identified by the words “expects”, “plans” “anticipates”, “believes”, “intends”, “estimates”, “projects”, “potential” and similar expressions, or that events or conditions “will”, “would”, “may”, “could” or “should” occur. Information inferred from the interpretation of drilling results and information concerning mineral resource estimates may also be deemed to be forward looking statements, as it constitutes a prediction of what might be found to be present when and if a project is actually developed. Although the Company believes the expectations expressed in such forward-looking statements are based on reasonable assumptions, such statements are not guarantees of future performance and actual results may differ materially from those in the forward-looking statements. Factors that could cause the actual results to differ materially from those in forward-looking statements include market prices, exploitation and exploration successes, and continued availability of capital and financing, and general economic, market or business conditions. Investors are cautioned that any such statements are not guarantees of future performance and actual results or developments may differ materially from those projected in the forward-looking statements. Forward looking statements are based on the beliefs, estimates and opinions of the Company’s management on the date the statements are made. The Company undertakes no obligation to update these forward-looking statements in the event that management’s beliefs, estimates or opinions, or other factors, should change.

This presentation may use the term “indicated resource”. The Company advises investors that although this term is recognized and required by Canadian securities regulations (under National Instrument 43-101 “Standards of Disclosure for Mineral Projects”), the US Securities and Exchange Commission does not recognize this term. Investors are cautioned not to assume that any part of or all of the mineral deposits in these categories will ever be converted into reserves.

Stephen Nano, President and CEO for the Company and a “Qualified Person” under National Instrument 43-101, has reviewed and approved the scientific and technical information in this presentation.
Mirasol Resources: Project Generator
Gold Silver Copper – Chile Argentina

• Well funded – Approx. $25.6 M CAD (cash & receivables to 2016)

• Conservative capital structure 44.2 million shares outstanding
  47.4 million fully diluted (3.2 m options)

• Discovery focused management & exploration team

• Delivered on business model via discovery & with sale of project

• High-calibre project portfolio:
  o Five Headline Projects – large system / multiple targets / drill ready
  o Rubi JV First Quantum Minerals copper-gold porphyry Chile

• New generative program & parallel project acquisition search

Core Shed – Virginia Core High Grade Silver deposit
– Atlas Gold Silver Project hand samples
Mirasol Resources Mio-Pliocene Arc Program - Chile

Chile-Argentina world class Mio-Pliocene arc for Cu/Au mineralization

- Teniente (13Mt Cu*) - Southern Porphyry Belt
- Pascua (22Moz Au, 674Moz Ag*) – El Indio Belt
- Alumbrera (17Moz Au, 3.4Mt Cu*) – Farallon Negro District
- Caspiche (25Moz Au, 60Moz Ag*) – Maricunga Belt

Until recently no large Mio-Pliocene gold deposits north of the Maricunga Belt for 950 km to the Choquelimpie deposit

→ Large extension of under-explored Mio-Pliocene Arc with potential for new world class Au, Ag & Cu discoveries.

* Global Resource = Reserves + Resources + Historic Production
New Gold Silver Discoveries North of the Maricunga Belt

North of La Coipa/Esperanza new precious metal discoveries

2013 Mirasol announces new outcropping discoveries Atlas & Titan high sulphidation gold silver systems in *Gorbea Gold Belt - Chile*

2014 Goldfields announce discovery & initial resource – Salares Norte 3.1 Moz Au @ 4.2 g/t Au & 34 Moz Ag @ 44.8 g/t

Demonstrates extension to productive mineralization cycle northwards

New Discoveries - Why Now?
• Improved geological understanding
• New exploration technologies

→Test high risk targets
Mapping Productive Mineral Belts with Geochronology

Two (three?) productive mineralization cycles in the Maricunga Belt

- **Early** ~22-26 Ma
  - Caspiche: 25.38 Ma
  - Santa Cecilia: 24.3 - 24.1 Ma
  - La Pepa: 23.88 - 22.3 Ma

- **Middle** ~17-20.7 Ma
  - La Coipa: 20.2 - 17.3 Ma
  - Esperanza: 20.7 - 18.6 Ma
  - Atlas: 19.86 Ma
  - Titan: 17.08 Ma

- **Late** ~11-14 Ma
  - Marte: 13.3 Ma
  - Volcan: 11.4 - 11.1 Ma
  - Cerro Casale: 13.98 - 13.5 Ma
Gorbea Gold Belt: Atlas & Titan Projects, Chile

2 New outcropping gold-silver systems / large system footprints / district play 9 projects

- Atlas Project
  - 100% Mirasol Owned
  - ASTER Alteration System
  - Magnetic Depletion

- Titan Project
  - 100% Mirasol Owned

- El Dorado Project
  - 100% Mirasol Owned

Crustal scale structural trends

Extensive strong ASTER satellite alteration zones

Large partially covered zones of magnetite destruction

Widespread outcropping Au/Ag mineralization

→ New Discoveries

- 25 km² alteration
- 6 km² area with multiple prospects
- No previous drilling

ASTER satellite Alteration System

Magnetic Depletion

Large gold system

Recon drill intersections

Up to 44m @ 1.21 g/t Au

Including 10m @ 3.85 g/t Au

ASTER satellite

ALTERATION

Magnetic Depletion

Analysis

Signal ground magnetics on ESRI World Imagery
Andesite-dacite dome field - 20.7, 18.6 & 17.6 Ma

Large advanced argillic alteration zone focussed SE of domes

Published K/Ar alunite alteration dates 18.1 & 21.1 Ma

New Ar/Ar alunite alteration date 19.86 +/- 0.04 Ma

Middle Maricunga Cycle

→ La Coipa age/min. style & geological setting
New large high sulphidation gold-silver system / high grade rock chip assays & geophysical anomalies

**ATLAS GOLD ZONE**
Rock Chips up to 50.3 g/t Au

**NEW OCULTO ZONE**
Anomalous Rock Chip to 2.91 g/t Au & 421 g/t Ag

**ATLAS SILVER ZONE**
Rock Chips to 639 g/t Ag

**NEW PAMPA ZONE**
Covered resistive zone. Outcrops of strong quartz-alunite alteration
AGZ prospect surface rock chip samples define an 800 by 500 m area with anomalous gold/silver.

55 samples in the range 1 - 50.3 g/t Au outline multiple NW trending vuggy silica structures.

AGZ gold structures traverse 1.1 km long trend with highly resistivity bodies.

New trench channel of vuggy silica structures & breccias, assay:
8.4 m @ 1.85 g/t Au,
11.3 m @ 1.32 g/t Au &
14.9 m @ 1.67 g/t Au
Atlas Gold Zone Trench & Sampling Photos

Vuggy silica structures with quartz-alunite halos & a barite late vein in the middle with 3.27 g/t Au in trench TR-01

Late stage barite vein common in vuggy silica structures with up to 3.27 g/t Au in trench TR-01

Cubic barite in vuggy silica structures with 8.85 g/t Au/45.8 g/t Ag in trench TR-03

Technician sampling Vuggy Silica Structure oblique (290° strike / 2 m thickness) to trench TR-02 with 7.28 g/t Au

Hydrothermal breccia zone exposed over 25 m in trench TR-02

Tambo like breccia vuggy silica clasts re-brecciatiation & leach clasts with late fill pink alunite with up to 5.07 g/t Au in TR-02
Na rich Alunite + vuggy silica spatially correlate with elevated Au in trench assays

• >2000 PSM* spectra – TSG software (& human interp.)
• Rock samples / lab coarse rejects
• Identify alteration mineral vectors → gold / silver
• Trenches → project level paleotemperature maps

**Trench Gold Assays (g/t)**
- 1.6m @ 7.28g/t Au
- 6.1m @ 0.94g/t Au Incl. 3.1m @ 1.52g/t Au
- 8.7m @ 1.84g/t Au Incl. 6.7m @ 2.33g/t Au
- 5.2m @ 1.46g/t Au Incl. 1.6m @ 2.63g/t Au
- 11.2m @ 0.3g/t Au Incl. 2.0m @ 0.51g/t Au

* PSM = Spectral Evolution - Portable SpectroMeter (PSM) 3500

**LEGEND**
- Primary Alteration Mineral
- Secondary Alteration Mineral
- Gold Assays from Trenching

**Surface Trace**
- Trenching
Areas of strong absorption in the 1415nm feature, indicating an increase in Dickite & Nacrite / temperature indicators.
Kaolin group minerals absorption feature depth map → paleotemperature map

Higher temperature dickite / nacrite assemblage correlates to increasing gold/silver grades in trenches

AGZ Prospect – good correlation with high temperature dickite / nacrite

ASZ Prospect – temperature increase in NE towards the edge of cover

Oculto Geophysical Target – indications of high temperature dickite / nacrite → permissive temperature window
Mineralization with breccia & silica sulphide replacement

Length weighted average channel sampling at end of trench: 55.9 m @ 39.9 g/t Ag

Best individual channels: 0.35 m @ 609 g/t Ag, 0.2 m @ 542 g/t Ag, 0.7 m @ 261 g/t Ag

Large scale covered drill targets indicated by geology & geophysics – paleotemperature mapping supports priority drill targets – ASZ & Oculto
Atlas Silver Zone Trench & Sampling Photos

Laminated ash with bands of intense advanced argillic alteration with 609 g/t Ag in trench TR-06

Ignimbrites with pervasive quartz opaline silica & sulfide/sulfosalt veinlets in trench TR-06 with 519 g/t Ag

Cinnabar wisps in the zone of the phreatic breccia with intense advanced argillic alteration (TR-06)

Upward flaring phreatic-hydrothermal breccia with clast samples up to 542 g/t Ag

Sulphur vein (dipping SW) in the middle of a phreatic vent breccia with intense advanced argillic alteration, trench TR-06

Polylithic hydrothermal breccia clasts of quartz vein fragment with bands of acanthite Suggest ISE or LSE

Phreatic – hydrothermal breccia
Atlas – New Drill Ready Gold Silver Project, Mio - Pliocene Chile

- New precious metal discoveries in under-explored segment of world class Mio-Pliocene age Au, Ag Cu belt in Chile
- Mirasol - Two new large outcropping Au / Ag HSE systems (Atlas & Titan) in belt play of 9 x 100% owned projects – Gorbea Belt
- Alteration age dating indicates Atlas & Titan correlate with productive mineral cycle → potential La Coipa analogy
- Atlas Gold Zone - significant area of outcropping gold bearing vuggy silica-alunite structures
- Atlas Silver Zone – high grade silver / anomalous gold in trenches with geophysical anomalies vectoring under cover
- Oculto - high priority geophysical target supported by paleotemperature vectors → Priority drill targets defined

→ Mirasol is seeking JV partners / strong offers received
