

CLEAN AIR BAGS

- Bags expand and contract as the clamp opens and closes

“re-using” the same air over and over again.

This prevents oil vapor from escaping into your plant air environment

Protect your hydraulic oil from contamination by prohibiting airborne particulate from getting into your machine through dirty air filters

- Bags are made of heavy-duty PVC-coated fabric.

- Double seamed and sealed for longer life.

- Cross-frame support simplifies installation.

- Can be retrofitted to almost Any molding machine!
