

## **Reciprocating Blowmolding Machines Safety Upgrades**

### **Safety Video Program**

#### Reciprocating Blowmolding Machines

This safety video program is geared for recipis and the downstream equipment including cooling conveyors and trimmers. It is extremely important that this safety program be presented to all personnel periodically who operate, service and maintain these machine lines. Safety is a key factor in preventing accidents and minimizing equipment damage and downtime. We are currently in the process of producing a spanish version of this safety video program.

In addition, should you have a need or desire to have a complete safety assessment performed on your uniloy machine line(s) to determine current compliance status, we would be more than happy to provide this service and discuss travel arrangements.

Should you be interested in the spanish version and/or have any machine safety related concerns or questions, please do not hesitate to contact your uniloy parts sales representative.
