

HUMAN MACHINE INTERFACE (HMI) REPLACEMENT

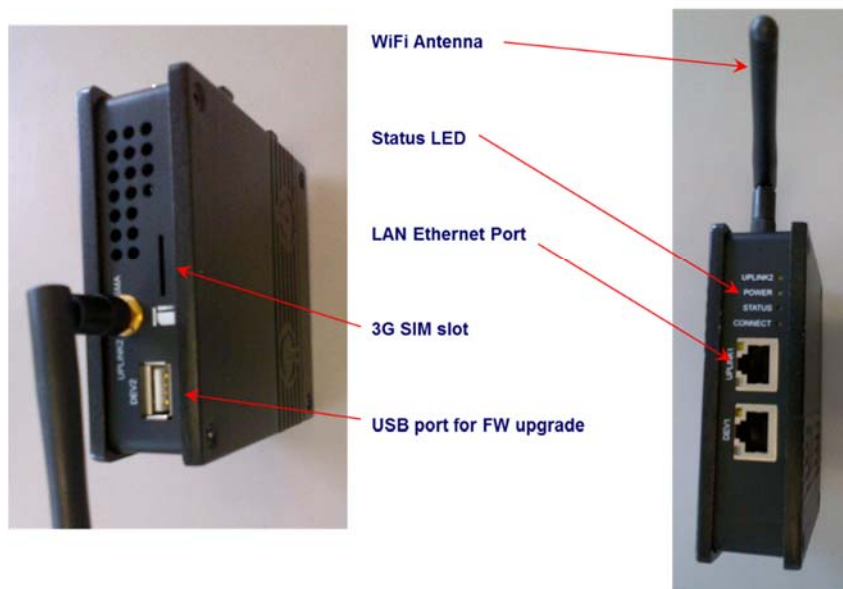

Product Description:

Replacement of obsolete B&R Human Machine Interface (HMI) with B&R 5AP980 touch screen.

THE MODEM / ROUTER

Advantages:

- Readily available components
- Improved remote troubleshooting support through Teleservice feature (**optional**)

Features:

Human Machine Interface replacement is necessary when the original HMI is out of order and can't be repaired anymore. A fully update hardware programmed for the relevant machine, will be provided. No Service Engineering is needed for the installation. It can be easily fitted in the machine by anyone with basic electric knowledge.

Hardware structure:

- PC B&R AP810 fitted with Windows XP
- Colour operating panel B&R 5AP980 with touch screen
- Connecting plate between PC and operating panel
- Modem port to connect the control system to a network for teleservice (**optional**)

Product Availability:

This HMI upgrade is available on machines that use the old version of the B&R panel and PC that is now obsolete, along with the modem device to perform remote connectivity service.
